

# HPCE DYNAMIS 300+/SAFETY VALVE COMPLETE WITH FITTINGS

Product group: **436** Product number: **1005051**

The HPCE DYNAMIS 300+/Safety Valve is engineered for dependable performance in high-pressure cleaning systems, ensuring robust protection against overpressure conditions. It limits the maximum operating pressure to 335 Bar, safeguarding the system during nozzle clogs, spray handle closure, or other disruptions. If the pressure surpasses the permissible limit, the valve activates to release excess pressure, either by redirecting it through its bypass or allowing controlled leakage, ensuring consistent system safety and reliability.

## Product information

### Benefits

- **Overpressure Protection:** The safety valve limits the maximum operating pressure to 335 Bar. If the pressure exceeds this limit due to the closing of the spray handle or nozzle clogging, to maintain system safety.
- **Automatic Pressure Relief:** In cases of excessive pressure beyond the permissible limit for any other reason, the safety valve activates to release the excess pressure, ensuring stability and protecting system components.
